

Thank you for your support!

To use this product to its maximum efficiency, you'll must a file into Illustrator's folders. Don't worry, you're doing it only once and it's done. Forever. The file is **InkyDeals ToolKit UI.file**

For **Windows**, here's how to do it:

1. Press Windows + R.
2. Type in %AppData% and hit Enter.
3. Access the folder "Adobe\Illustrator 19 Settings\en_US\x64\Workspaces"
4. Copy the file named **InkyDeals ToolKit UI.file** and paste it in (for older versions, it will be "CS3 to 6" instead of "19")

For **Mac OS**:

1. Open Finder
2. Select **Go->Go To Folder** Menu item
3. type **~/Library** and press Enter
4. Go inside "**Preferences**"
5. In the "Adobe Illustrator 19 Settings\en_US\x64\Workspaces" folder, copy the **InkyDeals ToolKit UI.file**

This is the UI you'll be using and it is optimized to bring all of the resources to the front. After you've copied it, simply restart Illustrator and load it from the UI dropdown menu. There is an **.ai file** provided, named **Save this file as template.ai**. **So save this file as a template.**

Open it, then go to **File -> Save as template**. Don't forget to rename it, it will be alot easier to find it in the plethora of templates you've stored.

That's about it. You are now ready to start!
