FOOD THAT MAGICALLY REGROWS ITSELF...

Growing anything from a seed is impressive but also difficult, unless you're blessed with a green thumb.

Sure, it saves on money but there has to be an easier way... and there is! You can actually grow food from kitchen scraps. There is something very MacGyver about that, no? It's true! You can upcycle everything from celery scraps to onion butts with a great chance of success. Use organic fruits and vegetables for the best results.

Green onions, lemongrass, leeks, fennel, & spring onions

-  Place your scraps in water for 2-3 days to encourage them to change for water fully.
-  If you're growing lemongrass, place the green stalks in water to sprout the greenies.
-  Harvest lemongrass once it reaches 6-8cm tall. Simply cut off what you need without uprooting the plant.

Celery, cabbage, romaine lettuce, & bok choy

-  Remove the roots, leaving the roots above the water line.
-  Spray with water a couple times a week, replacing the water every few days. Change with equal to about a cent.
-  Place the cuttings into soil and water above the soil. Harvest when fully grown, about 2 weeks.

Ginger

-  Soak the chunk of ginger overnight.
-  Rehydrate in water till the morning and then plant.
-  Ready to harvest in a year. Simply harvest when you see what you want and re-plant.

Onion

-  Plant root end and slightly under soil with long root down.
-  Carefully separate the roots, leaving the root attached and plant them.
-  Eventually you'll have three onions in a pot. Full growth is reached in 4-6 weeks. For plants to mature enough to harvest.

Garlic

-  The larger the clove the larger the resulting bulb.
-  Do the same in a sunny window, keeping the soil moist.
-  The bulbs will be ready for harvest in 6-8 weeks when the foliage (if) of the roots has yellowed.

Mushroom

-  Use a section of mushroom stem.
-  Place the mushroom stem in the soil with only the bottom of it exposed.
-  If the temperature and growth happens quickly harvest and enjoy.

Potatoes & Sweet Potatoes

-  The hole is given a depth of 10-15cm. Use a thin potato for an easier start. It's best to use a healthy, well-bred potato.
-  Add more soil as the plant grows until it is about 1/2 full.
-  Harvest your potatoes in a week. Dig them for a month before using. Use in other recipes like chips.

Pineapple

-  Slice off the green top and remove all fruit. Carefully remove the bottom layer and give me some roots.
-  Place in water for 2-3 weeks to keep roots.
-  Harvest Pineapples in 6-8 weeks. Harvest when the bottom leaves turn brown.
