

Clouds Text Effect In Photoshop

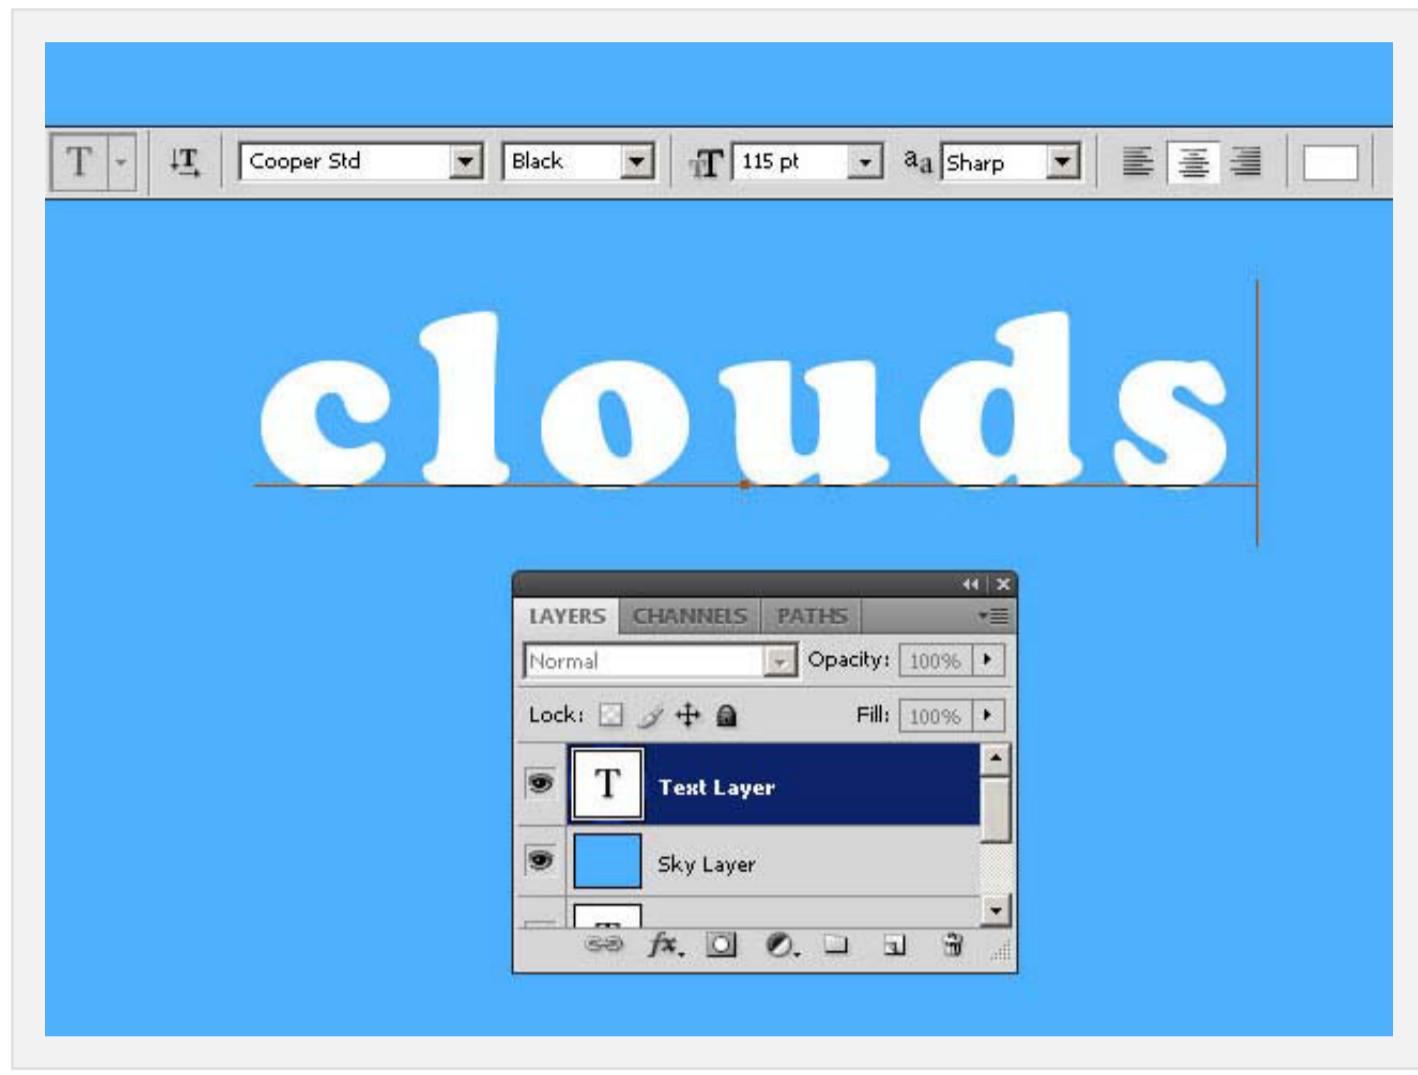

- 1 Let's take a quick look at the effect that we are about to create in Photoshop. The text will be transformed into a **clouds text** effect, better said a text that looks like it is made out of clouds. We will only need some simple Photoshop filters so nothing too complicated.

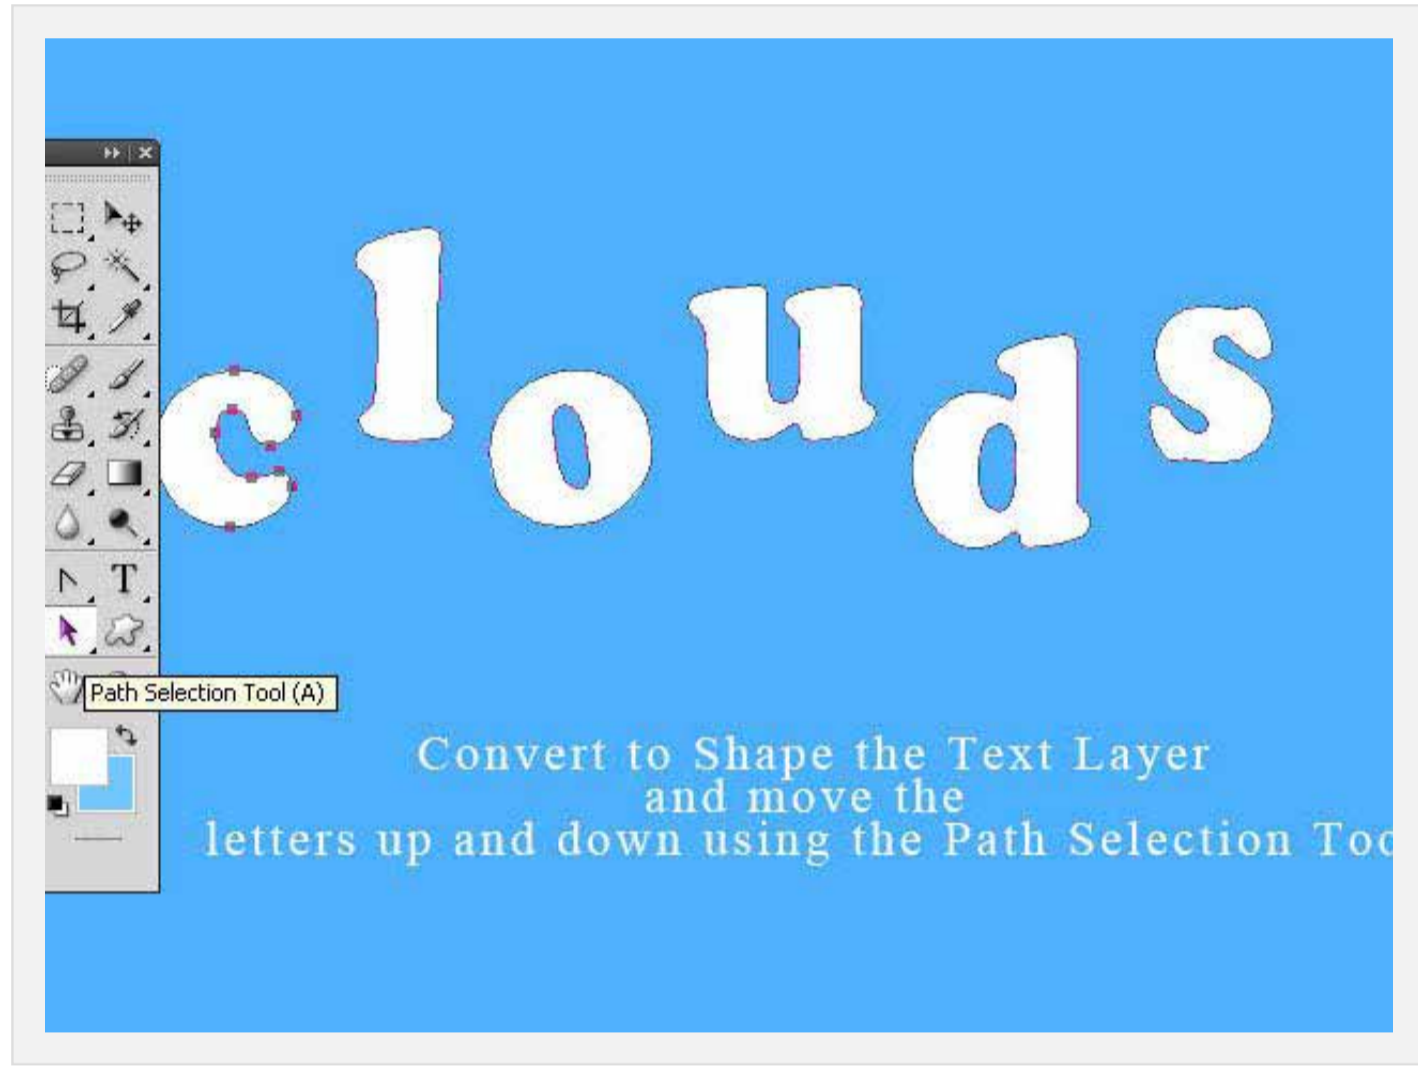

- 2 To create a **clouds text** in Photoshop we need a beautiful blue background to start with. This **blue background** will be our sky. So create a new layer, fill it with **#4db0ff** color and name it **Sky Layer**.

- 3 Add a new **Text Layer** and with the help of the **Horizontal Type Tool** write your text that you want. I will write "clouds" with **Cooper Std** font. You can choose whatever font you like, but I think it looks best on round fonts.

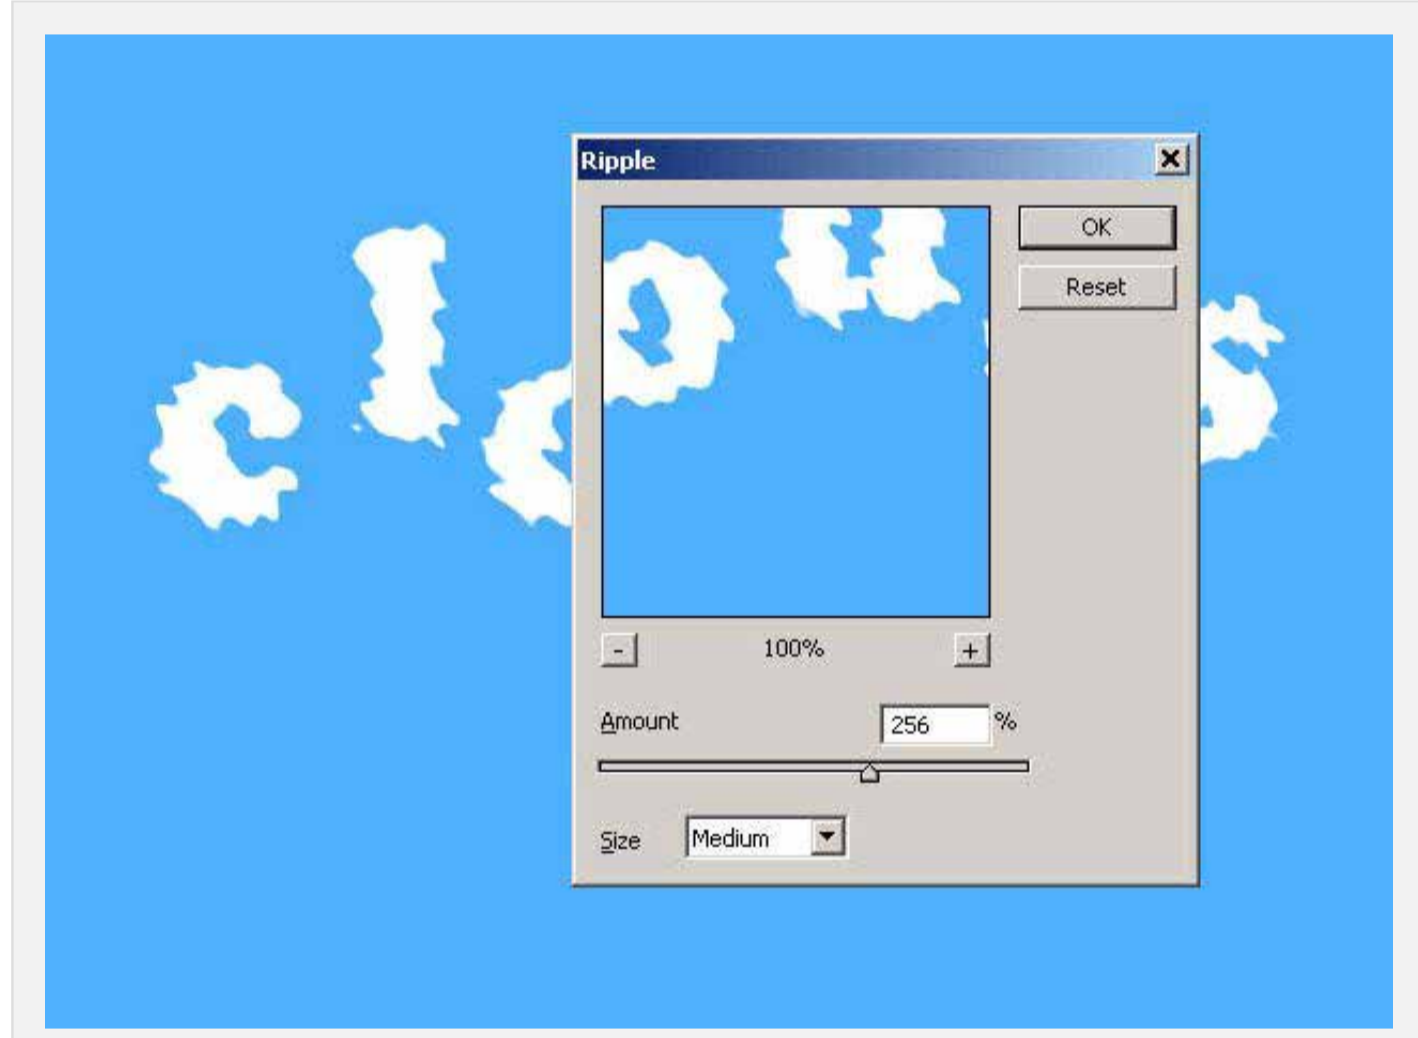

- 4 If you decide to use another font and you don't know how to install it check out this tutorial [Install Font in Photoshop](#).

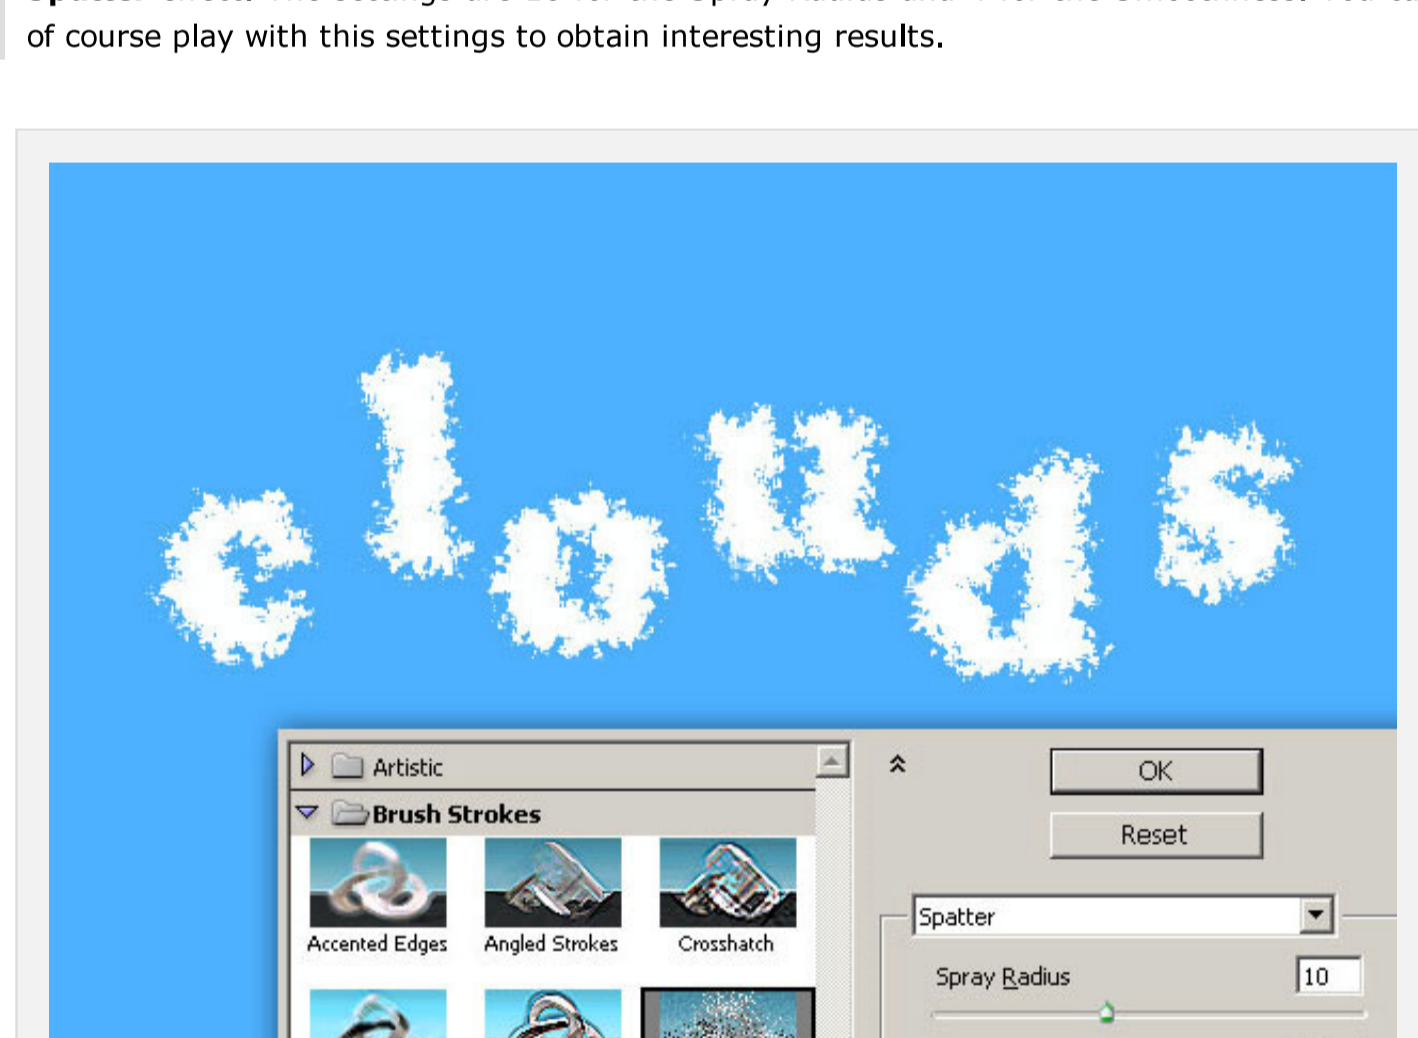

- 5 Right click on the **Text Layer** and **Convert to Shape** the text. Pick the **Path Selection Tool**, select the letters and move them up and down to look nicer.

- 6 Select the **Sky Layer** and the **Text Layer** and press **CTRL+E** to merge the two layers. Go to **Filter, Distort** and choose **Ripple** effect with the following settings.

- 7 Go to the **Filter** menu again, this time choose **Brush Strokes** and from that list pick **Spatter** effect. The settings are 10 for the Spray Radius and 4 for the Smoothness. You can of course play with this settings to obtain interesting results.

- 8 To make the text look more cloudy use the **Gaussian Blur** filter and you should obtain a similar result.

- 9 You can apply the **Photoshop Filters** that we've use in the previous steps one more time with different settings if you want to distort the text even more. You can also use some **clouds brushes** for the background to make it look more realistic. Remember that all this little details make the difference.
