

Steinway Sample Modeling GRD Piano Demo

This is a very small stereo sample (12.5 Mb) of my Steinway D , adapted for sample modeling use.

Sound consists of 20 OSC layers with all piano Fx , release plus 5 emulating velocity layers with advanced filtering in order to simulate the real thing on semi-weighted keyboard.

It belongs to an older commercial resources pack for Pa800 I made some years ago , I maintain distribution rights and offer to you strictly for personal use , as an alternative real Grd piano.

It's compatible for Pa3X/Pa900/Pa900 and relative products of them.

Open **Set/Sound/User1** and load piano sound to a vacant user place of your set and samples will be automatically loaded , the required free Ram memory is 12.5 Mb (uncompressed).

Enjoy
