How To Install And Use Downloaded Photoshop Actions

All you need to do is open your zip file (3D_generator.zip) and double click on the 3D.atn file, and you done! easy right?

How Use The Actions?

1- Create a new document on Photoshop (CS or higher) with 2000x2000 px, place in the center of the document your shape or text and resize it near to the edges.

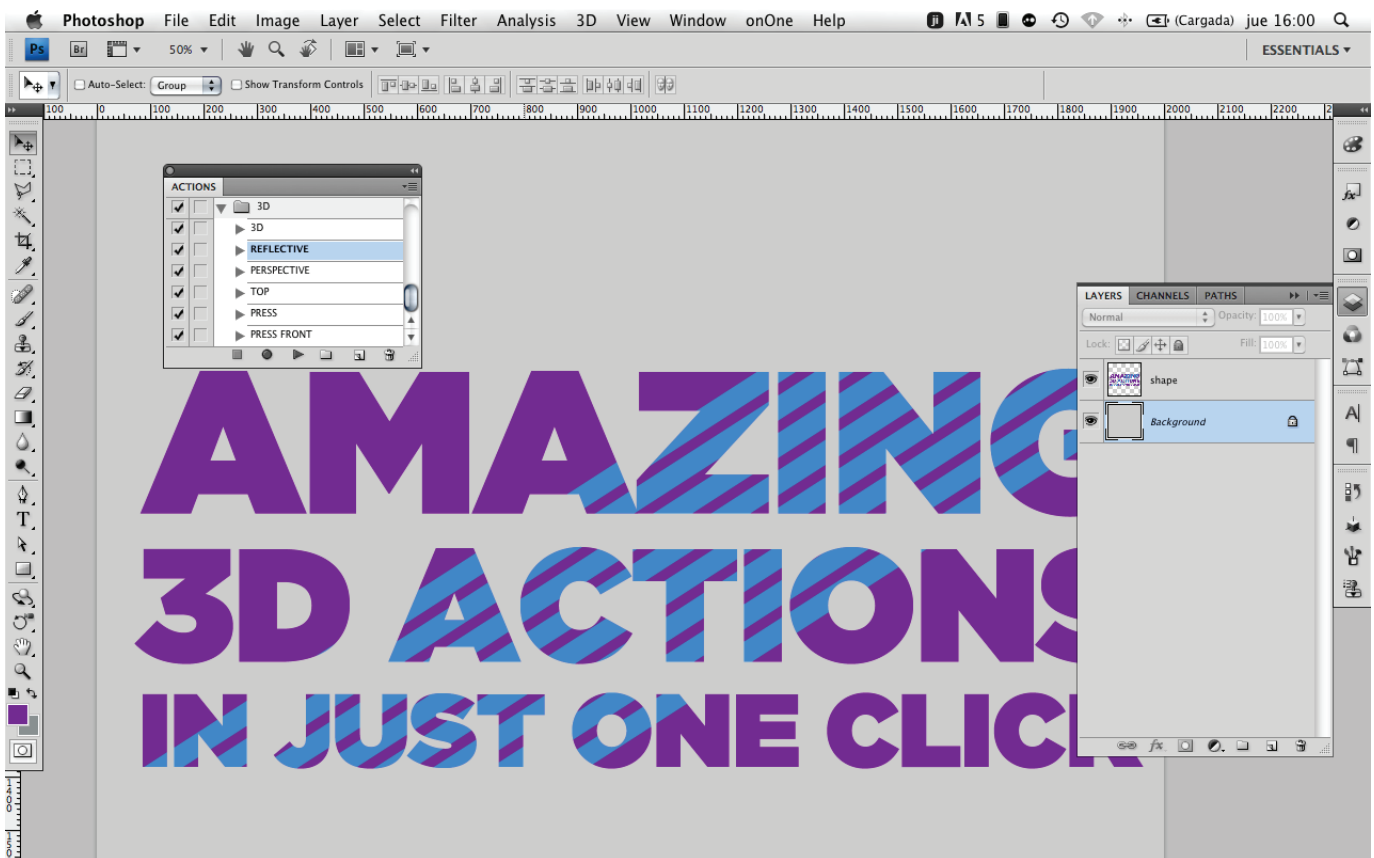

2- Make sure the layer of your shape has the name "shape" without the quotes and in lowercase.

3- Now you can give color or add more elements to your design, but everything must be in the same layer, if you need it merge all your items in to the same layer and rename it.

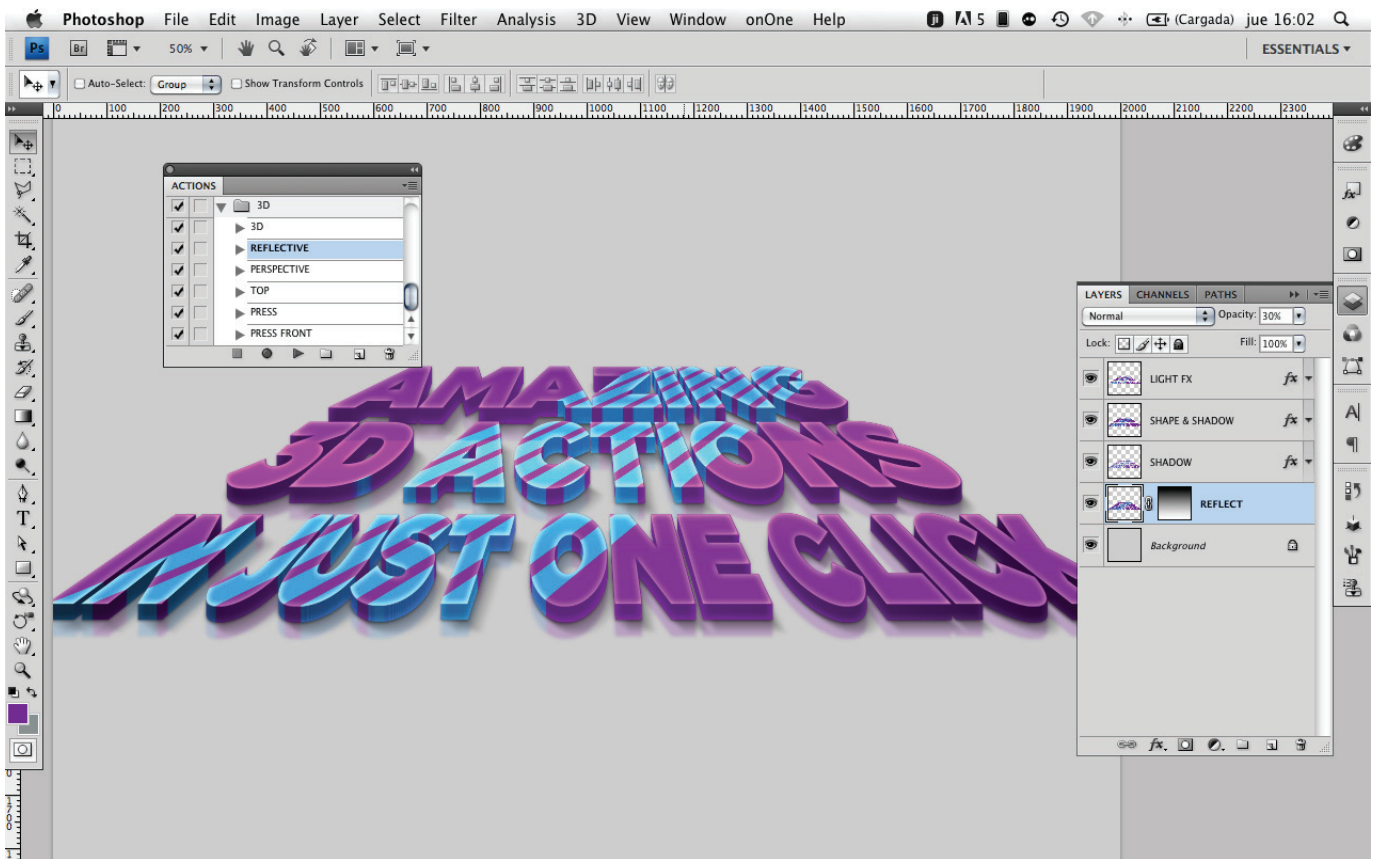

4- Now click on your desire action, press play and wait until it finish.

*IF YOU ARE USING TEXT, TURN IT IN TO A VECTOR SHAPE FIRST OR RASTERIZE IT.
(RIGHT CLICK ON THE LAYER > CONVERT TO SHAPE OR RASTERIZE TYPE)*

FOR TEXT STYLES, PLEASE REMOVE SHADOWS AND OUTER GLOWS, CREATE A NEW LAYER AND MERGE WITH YOUR TEXT STYLES.

FOR THIS EXAMPLE WE ARE GOING TO USE THE REFLECTIVE STYLE

When the actions finish you get your shape on 3D, and divided on layers, in that way you can remove or add effects to your shape

The action creates a new document named "3D" so, if you need change anything on your design, just close the 3D document and start again, without losing your master design.

If during the process, appears a window informing you that your text must be rasterized before proceeding, just click ok

Visit our website to learn how to use our actions in other projects and how to get something like this:

This Text Style is part of our Halloween Styles pack
