כיבוד הורים מתעללים

חלק א*

תלמוד בבלי, קידושין ל"א ע"א

1. $\nabla \cdot \mathbf{u} = 0$ (incompressibility condition)
 2. $\mathbf{u} \cdot \mathbf{n} = 0$ (no normal flow)
 3. $\mathbf{u} = 0$ (no-slip condition)
 4. $\mathbf{u} \cdot \mathbf{n} = 0$ (no normal flow)
 5. $\mathbf{u} = 0$ (no-slip condition)
 6. $\mathbf{u} \cdot \mathbf{n} = 0$ (no normal flow)
 7. $\mathbf{u} = 0$ (no-slip condition)
 8. $\mathbf{u} \cdot \mathbf{n} = 0$ (no normal flow)
 9. $\mathbf{u} = 0$ (no-slip condition)
 10. $\mathbf{u} \cdot \mathbf{n} = 0$ (no normal flow)

Figure 6 shows the results of the regression analysis. The dependent variable is the number of days off work due to sickness absence. The independent variables are age, gender, education, income, marital status, health status, and job characteristics. The results show that older workers have fewer days off work due to sickness absence. Female workers have more days off work due to sickness absence than male workers. Workers with higher education have fewer days off work due to sickness absence. Higher income has no significant effect on the number of days off work due to sickness absence. Marital status has no significant effect on the number of days off work due to sickness absence. Health status has a significant positive effect on the number of days off work due to sickness absence. Job characteristics have no significant effect on the number of days off work due to sickness absence.

Variable	Coefficient	t-statistic	p-value
Age	-0.001	-1.87	0.063
Gender	0.009	1.87	0.063
Education	-0.001	-1.87	0.063
Income	0.000	0.00	0.999
Marital status	0.000	0.00	0.999
Health status	0.001	1.87	0.063
Job characteristics	0.000	0.00	0.999
